LEAP26-06002 Indoor logo 1730 × 225 - P10 30 mm opal plexi, LED strip in groove 8 mm (wall 2) - face brightness simulation

Model: diffusion in opal acrylic (L = 16 mm), strip 20 mm behind face (groove depth 10), light only inside acrylic, sides lose light (alpha). Qualitative - calibrate with sample letter. Each letter normalized to its own median; green = dark (<0.6), cyan = LED strip.

A - current groove (centerline.py): rounded corners R = 2 x half-width, ends trimmed, 1 row in symbol
U (P5/median) avg 0.38, min 0.25; dark (<0.6 of letter median) 16.4 %

B - new groove (griovelis_b.py): sharp corners, ends to wall, symbol 2 rows (contour loop w/4 from edge)
U (P5/median) avg 0.41, min 0.26; dark (<0.6 of letter median) 15.5 %

B + reflective (white) sides inside - edge loss 0.05 instead of 0.3
U (P5/median) avg 0.55, min 0.39; dark (<0.6 of letter median) 6.9 %
